

QUANTITATIVE DISCLOSURE OF RZB CREDIT- INSTITUTION GROUP 2011.

Quantitative Disclosure of Raiffeisen Zentralbank Österreich Aktiengesellschaft pursuant to Article 26 Austrian Banking Act (BWG) in accordance with Disclosure regulation (OffV) as of 31/12/2011

Introduction

With this document, *Raiffeisen Zentralbank Österreich Aktiengesellschaft* (Raiffeisen Zentralbank) fulfils one part of its disclosure requirements pursuant to Article 26 Austrian BWG (Austrian Banking Act) in connection with the Disclosure Regulation (Offenlegungsverordnung, OffV)

In this document disclosure requirements regarding Articles 3, 4, 5, 6, 7, 9, 10, 12, 13, 14, 15a and quantitative requirements regarding Articles 8, 15, 16 and und 17 OffV have been presented. Qualitative disclosure requirements regarding Article 2, 8, 15, 16 and 17 are reported in the document "*Qualitative disclosure of RZB Credit Institution Group*". This document can be viewed at or downloadet from Raiffeisen Zentralbank's homepage (www.rzb.at).

The information is based on the valid regulations for the RZB Credit Institution Group on a consolidated basis at the time of publishing this document. Where not separately stated the information is simultaneously valid for the credit institution group of *Raiffeisen-Landesbanken-Holding GmbH* (RLBHOLD), Vienna, as requested in Article 26a (2) BWG (Austrian Banking Act). This financial holding is the ultimate parent of RZB.

Raiffeisen-Landesbanken-Holding GmbH, owned indirectly by the eight Austrian Regional Raiffeisen Banks holds via *R-Landesbanken Beteiligung GmbH* (RLBBET), Vienna, 81.03 % of the ordinary shares and 84.57 % of the preferences shares of *Raiffeisen Zentralbank Österreich Aktiengesellschaft*, Vienna. This represents a total share of 81.35 %

Definitions

In this document the following definitions have been used:

- **Basel II Approach:**

1. Standardised Approach (STA) according to Article 22a BWG
2. Internal Rating Based Approach (IRB) according to Article 22b BWG:
 - a. Equity: PD/LGD Approach according to Article 77 (4) SolvReg; Grandfathering according to Article 103e (11) BWG
 - b. Investments in Collective investment undertakings: Simple risk weight approach according to Article 77 (3) SolvReg
 - c. Specialised Lending: Supervisory Slotting Approach according to Article 74 (3) SolvReg

- **Exposure:**

1. Exposures are shown gross and defined as in Article 65 SolvReg the effects from CCF are not considered as well as provisions are not deducted from the exposure.

- **Exposure classes:**

Exposure classes according to the Standardised Approach as defined in Article 22a (4) N 2 BWG

1. Claims or contingent claims on central governments and central banks
2. Claims or contingent claims on regional governments or local authorities
3. Claims or contingent claims on administrative bodies and non-commercial undertakings
4. Claims or contingent claims on multilateral development banks
5. Claims or contingent claims on international organisations
6. Claims or contingent claims on institutions
7. Claims or contingent claims on corporates
8. Retail claims or contingent retail claims
9. Claims or contingent claims secured on real estate property
10. Past due items
11. Items belonging to regulatory high-risk categories
12. Claims in form of covered bonds
13. Short-term claims on institutions and corporates
14. Claims in the form of collective investment undertakings (CIU)
15. Other items
16. Securitisation positions

Exposure classes according to the Basic-IRB Approach as defined in Article 22b (2) N 3 BWG:

1. Claims or contingent claims on central governments and central banks
2. Claims or contingent claims on institutions
3. Claims or contingent claims on corporates
4. Retail - claims
5. Equity claims
6. Securitisation positions

- **Credit risk disclosure**

Disclosed information according to Article 7 OffV refers to total credit risk as defined for accounting purposes and according to the IFRS regulation:

1. Basis of consolidation: Generally the disclosed information is based on a consolidated view of the RZB Credit institution group. For statements based on the consolidated financial statements, the consolidated view is based on the IFRS group.
2. Exposure definition: Regarding credit risk only those exposures (on balance and off-balance sheet items) have been considered which contain a payment obligation agreed by contract (IAS 39, IFRS 7). Disclosure on the credit risk includes on and off balance sheet items except equity capital positions, investment funds and exposures without counterparty.
3. Exposure: In general the exposure is shown on a gross basis before deduction of the provisions; for securities the exposure is based on the value referring to the measurement categories (e.g. amortized cost, fair value). The breakdown of the exposure amounts will be made for the following material exposure classes:
 - Sovereigns
 - Financial institutions
 - Corporate customers
 - Retail customers

In contrast to Article 7 all other disclosures regarding credit risk regulated in Article 6, 8, 9, 15, 16 and 17 OffV are shown from a risk perspective and not from an accounting point of view.

Disclosures Regarding the Scope of Application

Article 3 OffV Differences in the consolidated group for accounting and regulatory purposes

The consolidated group is defined by all companies integrated in the consolidated financial statements. Due to different regulations the following two consolidated groups are distinguished:

- Consolidated group for accounting purposes (IFRS – IAS 27)
- Consolidated group for regulatory purposes - Article 30 BWG

Consolidated group for accounting purposes

The International Financial Reporting Standards (IFRS) published by the International Accounting Standards Board (IASB) are the basis for the definition of the consolidated group. The relevant standards for the consolidation are IAS 27 (in accordance with SIC-12), 28 and IFRS 3.

According to IAS 27 the group consolidates all material subsidiaries, in which Raiffeisen-Landesbanken-Holding GmbH directly or indirectly holds either more than 50 per cent of the voting rights or otherwise has control over the financial and operating policies. On principle, these subsidiaries are firstly integrated on the date when the Group obtains control of the company and are excluded when the group no longer has control of the company. Special purpose vehicles founded for securitisation transactions which are – from an economic point of view – controlled by the Group, are integrated according to SIC 12.

Material interests in associated companies – the Group exerts a significant influence on financial and operating policies of these companies – are valued at equity and reported under *investments in associates*. Profit or losses occurring in companies valued at equity are shown net in current income from associates. The same rules apply to companies valued at equity (offsetting acquisition costs against proportional fair net asset value) as apply to fully consolidated companies. On principle, IFRS financial statements of associated companies are used. Changes in equity of companies valued at equity are also treated in the consolidated accounts as changes in equity.

Shareholdings in subsidiaries not included in the consolidated financial statements because of their minor significance and shareholdings in companies which have not been valued at equity are shown under *financial investments* and are measured at amortized cost.

A list of fully consolidated companies and companies not included in the consolidated financial statement due to minor significance may be found on pages 195 – 197 in the “RZB Geschäftsbericht 2011” (in German).

The number of fully consolidated companies and companies valued at equity changed as follows:

Number of units	Fully consolidated		Equity method	
	2011	2010	2011	2010
As of 1/1	336	373	14	13
Included for the first time in the financial period	17	15	0	0
Merged in the financial period	0	(1)	0	0
Excluded in the financial period	(14)	(51)	0	0
As of 31/12	339	336	14	13

Of the 339 Group units, 172 are headquartered in Austria (2010: 171) and 167 are headquartered abroad (2010: 163). The companies comprise 23 banks, 187 financial institutions, 23 providers of related services, 15 financial holding companies and 91 other companies. Due to the insignificance for the assets, financial situation and earnings, 337 subsidiaries (2010: 324) were omitted from the consolidation. These are recognized at cost as shares in affiliated companies under securities and equity participations. Total assets of unconsolidated companies account for less than 1 per cent of the Group's total assets.

A list of fully consolidated companies, companies valued at equity and other equity participations may be found on page .

Consolidated group according to regulatory requirements

The number of companies of the RZB Credit Institution Group amounts to 341 units as of end of December 2011.

Number of units	Fully consolidated	Proportionally consolidated	Equity method
As of 1/1	329	1	7
Included for the first time in the financial period	21	0	0
Merged in the financial period	0	0	0
Excluded in the financial period	(9)	0	0
Reclassified	0	0	0
As of 31/12	341	1	7

The basis for the regulatory consolidation is the Austrian Banking Act (BWG).

Different to the consolidated group for accounting purposes, only companies which are specialised on bank and other financial businesses, have to be considered. This means affiliated companies with non bank business do not have to be included in the regulatory consolidated group.

Moreover insurance companies will not be considered in the consolidated group for regulatory purposes. Participations and instruments related to such participations held in insurance undertakings, reinsurance undertakings and insurance holding companies, will be deducted from the own funds.

The range of members of the Credit institution group is regulated in Article 30 BWG. Credit institution group exists when a superordinated institution (credit institution or financial holding company) incorporated in Austria, in relation to one or more lower-order institutions (credit institutions, financial institutions, investment firms or companies providing banking support services) incorporated in Austria or abroad:

- directly or indirectly holds a majority ownership interest,
- holds a majority of the voting rights in the company,
- has the right to appoint or dismiss a majority of the members of the administrative, management or supervisory body;
- has the right to exercise a controlling influence;
- actually exercises a controlling influence;
- on the basis of a contract with one or more members, has the right to make decisions as to how members' voting rights are to be exercised in the appointment or dismissal of the majority of members of the management or supervisory body where necessary in order to attain a majority of all votes; or
- directly or indirectly holds at least 20% of the voting rights or capital in the subordinate institution and this participation is managed by a group undertaking jointly with one or more undertakings which do not belong to the group of credit institutions.

Full consolidation

According to the regulatory consolidated group all affiliated companies of the RZB credit institution group, only companies which fulfil the above mentioned requirements, will be fully consolidated.

According to Article 24 BWG the superordinated company has to fully consolidate the basis of valuation for the credit risk as regulated in Article 22 (2) BWG, the positions in the trading book in accordance with Article 24a BWG, the open foreign exchange positions and gold positions pursuant to Article 24b BWG and the own funds of the group of credit institutions as regulated in Article 23 BWG.

Development	As of 1/1/2011	Allocation	Disposal	Mergers	Re- classified	As of 31/12/2011
Credit institutions domestic	6	0	0	0	0	6
Credit institutions foreign	17	0	0	0	0	19
Credit institutions total	23	0	0	0	0	25
Financial institutions domestic	106	4	(3)	0	0	107
Financial institutions foreign	146	10	(4)	0	0	152
Financial institutions total	252	14	(7)	0	0	259
Other domestic	18	2	(2)	0	0	18
Other foreign	36	3		0	0	39
Other total	54	5	(2)	0	0	57
Total	329	21	(9)	0	0	341

For the regulatory consolidated group Article 24 (3a) BWG is applied. Each unit not exceeding the balance sheet total of € 10 million and not fully consolidated in the RZB Group is not considered. This applies for 49 units of minor importance, thereof 40 financial institutions, 8 companies rendering bank-related ancillary services and 1 financial holding.

Proportional consolidation

If the superordinate credit institution holds directly or indirectly at least 20 % of the voting rights or capital in the subordinate institution and this participation is managed by a group of undertakings jointly with one or more which do not belong to the group of credit institutions, proportional consolidation according to Article 30 (1) N 7 BWG is applied.

As of December 2011 only one credit institution, *NOTARTREUHANDBANK AG*, Vienna, has been proportionally consolidated.

Equity method

According to Article 24 (3) N 2 BWG, participations in credit institutions, financial institutions and companies rendering bank-related ancillary services, as long as they do not belong to the group of credit institutions or are not voluntarily included in proportional consolidation according to Article 24 (4) BWG, are consolidated by using the equity method.

Differences arising from the off-setting of the carrying amount and the proportional net assets are calculated in a separate tool. The equity capital comes from the last audited individual statement or consolidated financial statement available. The carrying amount is adapted monthly and the changes in the carrying amount resulting from capital increases are also considered in the equity capital. The share in the company is the group's share and not the computed effective share of Raiffeisen Zentralbank.

The following companies are consolidated at equity:

Units	Share	Company type*
Österreichische Hotel- und Tourismusbank Gesellschaft m.b.H., Vienna	31.3%	KI
Oesterreichische Kontrollbank AG, Vienna	8.1%	KI
Raiffeisen Bausparkasse GmbH, Vienna	37.0%	KI
Raiffeisen Kapitalanlage-Gesellschaft m.b.H., Vienna	50.0%	KI
card complete Service Bank AG, Vienna	25.0%	KI
Raiffeisen Wohnbaubank AG, Vienna	25.0%	KI
Raiffeisen Banca pentru Locuinte S.A., Bucharest (RO)	26.3%	KI

* Company type: KI...Credit institutions, BH... Companies rendering bank-related ancillary services, FI...Finance institutions, SU...Other, WP.... Security companies

Companies deducted from the own funds

According to Article 23 BWG participations in some companies have to be deducted from the own funds. This regulation is relevant for:

- directly and indirectly held equity shares, subordinated claims, participation capital, supplementary capital or other forms of capital owned by RZB credit institution group in other credit or financial institutions in which Raiffeisen Zentralbank directly or indirectly holds more than 10% of capital;
- participations or instruments related to such participations pursuant to Article 73b VAG (Insurance Supervisory Act) held by a credit institution in insurance undertakings, reinsurance undertakings and insurance holding companies.

Participations in 15 credit institutions, 104 financial institutions and 3 insurance companies are deducted from the own funds.

Impediments for the transfer of funds

In the RZB Credit Institution Group there are currently no known impediments of a substantial, practical or legal nature to the prompt transfer of own funds or the repayment of liabilities among the parent undertaking and its subsidiaries.

In some countries in which RZB Credit Institution Group is operating, the payment of dividends is subject to certain restrictions. Such restrictions are for example due to the applicable minimum capital requirements or liquidity requirements or due to requirements from local regulators.

Aggregate amount by which actual funds are less than the required minimum in all subsidiaries not included in the consolidation

There are no such capital deficiencies for subsidiaries not included in the consolidation but deducted from the own funds.

Own funds

Article 4 OffV Structure of own funds

The own funds of the RLBHOLD credit institution group according to Article 23 respectively Article 24 BWG break down as of 31 December 2011 as follows:

€000	2011	2010
Paid-in capital according to Article 23 (3) BWG	2,450,906	2,450,906

(-) IRB Provision shortfall and IRB equity expected loss amounts	0	0
(-) Participations hold in insurance undertakings, reinsurance undertakings and insurance holding companies pursuant to Art. 103e no. 13 ABA	529,776	526,518
(-) Other instruments hold in respect of insurance undertakings, reinsurance undertakings and insurance holding companies in which a participation is maintained pursuant to Art. 103e no. 13 ABA	0	0
Total	1,162,615	1,182,957

Summary of the main features of all own funds items

Core capital (Tier -1-capital)

Paid-in capital

Paid-in capital comprises subscribed capital and capital reserves of Raiffeisen Zentralbank. The subscribed capital and disclosed reserves are available till corporation length. This also applies to minority interests in the subordinated company.

Regarding changes in equity in the reporting period please refer to table „Statement of changes in equity“ in the consolidated financial statements (“RZB Geschäftsbericht 2011“, page 96).

Earned capital

Earned capital includes retained earnings and consolidated profit after deduction of the proposed dividend for the financial year. .

Hybrid tier-1-capital

The hybrid capital breaks down as follows:

Issuer €000	Title	Amount	ISIN	Interest rate
RZB Finance (Jersey) II Limited, St. Helier	EUR 100.000 Perpetual Non-cumulative Non-voting Fixed/Floating Rate Preferred Securities	100,000	XS0173287862	5.9%
RZB Finance (Jersey) III Limited, St. Helier	EUR 200.000,000 Perpetual Non-cumulative Subordinated Floating Rate Capital Notes	200,000	XS0193631040	CMS 10 +0.1% capped at 9%
RZB Finance (Jersey) IV Limited, St. Helier	EUR 500.000,000 Non-cumulative Subordinated Perpetual Callable Step-up Fixed to Floating Rate Capital Notes	500,000	XS0253262025	5.2%

Additional own funds (Tier -2 -capital)

Additional own funds

The supplementary capital has to fulfil the requirements stated in Article 23 (7) BWG. According to Article 23 (7) BWG, interest on supplementary capital may be paid out insofar as it is covered by a sufficient profit for the year and in case of bankruptcy supplementary capital is repaid only after all other debts outstanding at that time have been settled. The supplementary capital available is totally issued in euro.

Eligible own funds regarding supplementary capital is stated in Article 23 (14) BWG.

Subordinated capital

The subordinated capital has to fulfil the requirements stated in Article 23 (8) BWG. Subordinated capital, documented or undocumented, is subordinated, if – in the event of liquidation or bankruptcy – it ranks after the claims of all other creditors and is not to be repaid until all other debts outstanding at the time have been settled. Subordinated capital must have an original maturity of at least 5 years. The subordinated capital available is issued with only small exceptions in euro.

Short-term subordinated capital (Tier-3-capital)

The short-term subordinated capital has to fulfil the requirements stated in Article 23 (8a) BWG. The short-term capital must have an original maturity of at least 2 years. The short-term subordinated capital consists totally of maturing tier-2-capital which is not or partly eligible as additional own funds.

Minimum capital requirements

Article 5 OffV – Minimum capital requirements according to Article 22 (1) BWG

The minimum capital requirements for the RLHOLD credit institution group according to Article 22 (1) BWG amount to € 7.985.248 thousand and break down according to risks as follows:

€000	31/12/2011	31/12/2010
Capital requirements for credit risk	6,516,057	6,413,848
Standardised Approach - Exposure classes according Article 22a (4) N 2 BWG	3,399,417	3,337,271
Claims or contingent claims on central governments and central banks	281,455	296,991
Loans and advances to regional governments	7,920	7,614
Claims or contingent claims on administrative bodies and non-commercial undertakings	1,975	3,546
Claims or contingent claims on multilateral development banks	0	0
Claims or contingent claims on international organisations	0	0
Claims or contingent claims on institutions	61,760	87,213
Claims or contingent claims on corporates	1,744,257	1,584,806
Retail claims or contingent retail claims	543,421	533,877
Claims or contingent claims secured on real estate property	242,269	247,386
Past due items	165,136	186,940
Items belonging to regulatory high-risk categories	12,555	9,418
Claims in form of covered bonds	105	0
Short-term claims on institutions and corporates	0	0
Claims in form of collective investments undertakings (CIU)	9,458	10,017
Other items	325,289	363,745
Securitisation positions	3,817	5,718
Internal Rating Based Approach - Exposure classes according Article 22b (2) N 3 BWG	3,116,640	3,076,577
Claims or contingent claims on central governments and central banks	3,107	70,281
Claims or contingent claims on institutions	356,163	417,526
Claims or contingent claims on corporates	2,560,722	2,355,710
Retail claims or contingent retail claims	173,646	197,173
Equity claims	19,966	25,080
Securitisation positions	3,036	10,807
Capital requirements for market risk	660,058	712,288
Capital requirements for operational risk	809,133	853,850
Operational Risk Standardized Approach	806,690	851,532
Operational Risk Basic Indicator Approach	2,443	2,318
Capital requirements (total)	7,985,248	7,979,986

The minimum capital requirements for equity exposures in the IRB approach are calculated with the PD/LGD approach according to Article 77 (4) SolvReg.

The simple risk weight approach is used for investments in collective investment undertakings (CIU).

The total amount of the minimum capital requirements for equity exposures which are calculated by using the standardised approach as regulated in Article 103e (11) BWG is € 19.966 thousand.

Equity claims €000	31.12.2011	31.12.2010
Equity exposure according to IRB approach	19,966	25,080
Simple risk weight approach according to Article 77 (3) SolvReg	14,604	17,755
PD/LGD approach according to Article 77 (4) SolvReg	5,361	7,325
Grandfathering according to Article 103e (11) BWG	71,929	68,187

Article 10 OffV – Minimum capital requirements for other risk types (Market Risk)

The minimum capital requirements for market risk according to Article 22 (1) N 2 and 3 BWG break down as follows:

€000	31/12/2011	31/12/2010
Own funds requirement for market risk (internal model)	309,424	68,458
Specific position risk associated with interest rate instruments	131,015	142,845
General position risk associated with interest rate instruments	59,801	44,140
Specific position risk associated with equity instruments	28,235	10,528
General position risk associated with equity instruments	20,140	17,744
Risk associated with equity index futures	3,725	8,032
Risk associated with shares in investment funds	5,558	8,573
Other option-related risks	7,101	7,418
Settlement risk	7	10
Commodities risk	16,264	17,653
Foreign-exchange risk (including the risk arising from gold positions)	78,644	385,622
Specific position risk in securitisation	146	1,264
Own funds requirement for market risk in kind of risk (total)	660,058	712,288

Quantitative disclosure for credit risk

Article 8 OffV Credit risk according to the Standardised Approach

The exposure and the exposure after credit risk mitigation (uncollateralised exposure) for each exposure class break down as follows:

The external ratings applied are mapped to the credit quality steps (rating notches) defined in the standardised approach for credit risk in accordance with standard mapping pursuant to Article 21b (6) BWG. A mapping table can be found on page 13 in the document "Qualitative disclosure of RZB credit institution group".

Overview Standardised Approach Exposure Classes

Standardised Approach - Exposure classes according Article 22a (4) N 2 BWG €000	Exposure	Own funds requirement
Claims or contingent claims on central governments and central banks	23,394,597	281,455
Loans and advances to regional governments	227,300	7,920
Claims or contingent claims on administrative bodies and non-commercial undertakings	415,577	1,975
Claims or contingent claims on multilateral development banks	36,718	0
Claims or contingent claims on international organisations	1,015	0
Claims or contingent claims on institutions	2,319,456	59,006

Article 16 OffV Credit risk according to the IRB approach

The total exposure for which capital requirements are calculated by using the IRB approach is € 94.025.012 thousand. The exposure for each asset class is shown in the following break down:

Internal Rating Based Approach - Exposure classes according Article 22b (2) N 3 BWG €000	Exposure	Own funds requirement
Claims or contingent claims on central governments and central banks	599,098	3,107
Claims or contingent claims on institutions	24,802,728	356,163
Claims or contingent claims on corporates	63,548,694	2,560,722
hereof Specialised lending	5,428,223	146,685
Retail - claims	4,686,179	173,646
hereof secured by real estate	3,667,160	134,558
Equity claims	96,669	19,966
Securitisation positions	340,982	3,036
Total Amount	94,074,350	3,116,640

In the following tables details to the exposure value and the exposure-weighted average risk weight after credit risk mitigation for the exposure classes according to Article 22b (2) N 1 to 5 BWG (central governments and central banks, institutions, corporates, retail and equity exposures) have been disclosed. The exposure values and risk weights are additionally splitted to the different PD classes, including the grade for defaulted obligors, in order to enable a meaningful differentiation on credit risk.

The following table shows the default probabilities used for the calculation of own funds requirements for individual PD grades:

PD classes	PD in %
1	0.00 - 0.03
2	0.03 - 0.07
3	0.07 - 0.10

Article 9 OffV Specialised lending and equity claims according to the IRB approach

The exposures for specialised lending are assigned to each category, as regulated in Article 74 (3) SolvReg, and presented as follows

Categories	Risk weight	Exposure
Category 1	50 %	2,548,407
Category 2	70 %	1,793,970
Category 3	115 %	466,309
Category 4	250 %	295,150
Non performing loans		324,387
Total		5,428,223

According to the IRB approach, the capital requirements for investments in collective investment undertakings (CIU) are calculated by using the simple risk weight approach as regulated in Article 77 (3) SolvReg. All collective investment undertakings receive 370% risk weight.

Risk weight €000	Exposure
190 %	0
290 %	0
370 %	49,338

Article 6 OffV Counterparty credit risk

Article 6 (1) OffV Methodology used to assign internal capital according to Article 39a BWG and credit limits for counterparty credit exposures

If a counterparty in a derivative, repurchase, securities or commodities lending or borrowing transaction defaults, then losses can arise from re-establishing the contract with another counterparty. In RZB this risk is measured by the mark-to-market approach where a predefined add-on is added to the current positive fair value of the contract in order to account for potential future changes. For internal management purposes potential price changes, which can affect the fair value of an instrument, are calculated specifically for different contract types based on historical market price changes.

For derivative contracts, the standard limit approval process applies, where the same risk classification, limitation, and monitoring process is used as for traditional lending. In doing so, the weighted nominal exposure of derivative contracts is added to the customers' total exposure in the limit application and monitoring process as well as in the calculation and allocation of internal capital.

Article 6 (2) OffV Policies for securing collateral and establishing credit reserves

An important strategy for reducing counterparty credit risk is credit risk mitigation techniques like netting agreements and collateralization. In general, RZB strives to establish standardized ISDA master agreements with all counterparties in order to be able to perform close-out netting and credit support annexes (CSA) for full risk coverage for positive fair values on a daily basis.

Master agreements have to be executed for repurchase transactions, securities lending transactions and OTC derivatives transactions. The majority of these agreements are based on widely used industry standards provided by market associations like ISDA or ICMA. Credit risk mitigation techniques are strictly subject to independent legal opinions which state the enforceability of the applicable master agreement.

Article 6 (3) OffV Regulations for correlation risks

Correlation risks between exposure and collaterals of repurchase transactions, securities lending transactions and collateralised lending are restricted by comprehensive risk limits. Limits are established to confine correlations of collaterals with the following risks:

- Counterparty risk
- Country risk
- Issuer risk in case of securities collateral

Correspondent limits exist on the counterparty level and on the over-all volume of accepted collaterals.

Correlation risks between derivative transactions and assets received to cover credit exposure are restricted by a restrictive list of eligible collaterals. For this business line, only cash collateral denominated in EUR, USD and GBP as well as AAA-rated government bonds issued by countries of the European Union and the United States of America are accepted. Correlation between these assets and the underlying derivatives exist only in a negligible extent.

Article 6 (5) OffV Rating downgrade

Rating dependent terms and conditions in credit support agreements are avoided as far as possible, so that a possible downgrade would have only minor impact on the amount of collateral.

The relevant rating by Standard & Poors and Moody's is currently A and respectively A1. The below denoted amount of maximum additional collateral requirements will become effective in full only if both rating agencies would downgrade RZB's long term credit rating and an adverse market movement would require corresponding collateral.

S&P	Moody´s	Max. additional collateral requirement
		€000
AAA	Aaa	0
AA+	Aa1	0
AA	Aa2	0
AA-	Aa3	0
A+	A1	0
A	A2	82,000
A-	A3	116,000
BBB+	Baa1	120,000
BBB	Baa2	121,000
BBB- and below	Baa3 and below	122,000

The following table shows the gross positive fair value of derivative contracts. In line with current counterparty credit risk measurement we show the potential future exposure instead of the current credit exposure. In contrast to the current exposure the potential future exposure includes also the potential credit risk arising from market value changes in the underlying position. On the other hand exchange traded derivatives are excluded as their positive fair values are settled daily through margin calls.

Article 6 Z 5 OffV at fair value through profit or loss	Actual at fair value through profit or loss	Counterparty credit risk	Netting benefits	Netted potential credit exposure	Collateral held	Net credit exposure
€000						
Interest rate contracts	1,333,852	10,399,644	8,081,683	2,317,962	669,946	1,648,016
Foreign exchange rate contracts	(286,140)	1,927,649	480,623	1,447,026	119,318	1,327,708

Article 15 OffV Securitisations

Raiffeisen Zentralbank as Originator

Up to now the following transactions have been executed with external contractual partners (the indicated amounts represent the transaction volumes at the closing date):

€000	Seller of claims or secured party	Closing date	End of maturity	Volume	Portfolio	Junior Tranche
True sale transaction ROOF Poland 2008(1)	Raiffeisen-Leasing Polska S.A., Warsaw (PL)	January 2008	December 2014	290,000	Car leasing contracts	1.3%
True sale transaction ROOF Russia 2007(1)	ZAO Raiffeisenbank, Moscow (RUS)	May 2007	May 2017	297,000	Car loans	1.9%
Synthetic Transaction ROOF CEE 2006(1)	Raiffeisen Bank Polska S.A., Warsaw (PL) Raiffeisenbank a.s., Prague (CZ)	March 2006	March 2019	450,000	Company loans	1.8%

In financial year 2011, no new securitisations were made. Both true sale transactions (Warehousing) ROOF Bulgaria 2008-1 and ROOF Romania 2008-1 already closed in 2008 were not yet transferred to final securitisation. The reason for this is the recent developments on the international capital markets, and the resulting liquidity crunch. Nevertheless, the warehousing has been prolonged and the current warehousing structures kept alive by the placement of notes to Group internal investors until further notice.

The total outstanding amount for exposures which have been securitised by the RZB Group as of 31/12/2011 and are subject to the securitisation framework is € 697,542 thousand and break down into traditional and synthetic securitisations as follows:

Article 15 Z 14a OffV €000	Outstanding amount		
	Traditional securitisation	Synthetic securitisation	Total
Leasing	84,544	0	84,544
Corporate loans	0	188,439	188,439
Car loans	5,915	0	5,915
Total	90,459	188,439	278,898

There are no impaired and past due exposures as also no revolving exposures in the outstanding amount of the securitised exposures.

Raiffeisen Zentralbank as Investor

The retained and purchased securitisation positions are broken down by exposure type and risk weight bands as follows: Each company which have retained securitisation positions from other companies and has reported them as internal exposures will be consolidated.

Article 15 Z 14b OffV €000	Retained and purchased securitisation positions
Asset-backed Securities (ABS) car loans	65,752
Asset-backed Securities (ABS) leasing	142,025

Disclosure according to accounting regulations

Article 7 OffV Credit and dilution risk

Definition of the terms „past due“ and „non-performing“ for accounting purposes

Past due exposures

The definition of default and the assessment of expected recovery value are heavily influenced by the number of days payments are late. Exposures are past due when the contractually agreed date for payment has been exceeded. Payments are considered past due when the borrower has exceeded the approved credit limit.

Non-performing exposures

Default is defined in RZB as the event where a specific debtor is unlikely to pay its credit obligations to the Group from primary sources, or the debtor is overdue more than 90 days on any material credit obligation. RZB has defined twelve default indicators which are used to identify a default event including the insolvency or similar proceedings of a customer, if an impairment provision has been allocated or a direct write-off has been carried out, if credit risk management has judged a customer account receivable to be not wholly recoverable, or the restructuring unit is considering stepping in to help a company restore its financial soundness.

The credit portfolio and individual borrowers are subject to constant monitoring. The main purposes of monitoring are to ensure that the borrower is meeting the terms and conditions of the contract as well as following the obligor's economic development. A review is conducted at least once annually for corporate customers, financial institutions, and sovereigns. This includes a rating review and the re-evaluation of financial and tangible collaterals.

Within the scope of the Basel-II-project a Group-wide default database has been created for recording and documenting customer defaults. The database tracks recoveries and work-out costs as well, which makes it suitable for calculating and validating PDs and LGDs (the probability of default, PD, and loss given default, LGD, both are parameters in the regulatory Internal Ratings Based approach used for determining required own funds and the Group's internal risk quantification models).

Approaches and methods for determining value adjustments and provisions

Troubled loans (where debtors are expected to run into material financial difficulties or delayed payment) need special handling. In non-retail divisions, problem loan committees of each Group member review problematic exposures. In case of the need for intensified handling and workout, the troubled loans are assigned either to a designated specialist or to a restructuring unit (workout department), both part of the risk or credit risk management divisions. Employees of workout units are specially trained and experienced. They typically handle medium-sized to large cases and are assisted by in-house legal departments and/or by external specialists as well. Workout units play a decisive role in accounting and analysing as well as booking provisions for impairment losses (write-offs, value adjustments, provisioning). Their early involvement can help reducing losses caused by troubled loans. Cases in which restructuring or liquidation take place, are analyzed in RZB to find out their causes. Lending processes are then adapted as necessary on the basis of these results.

Default and work-out standards in the retail area are defined for the whole restructuring and collection process for private individuals and small enterprises. A restructuring guideline defines the Group's restructuring framework including the strategy, organization, methods, monitoring and controlling. In the collection process customers are classified into three categories "Early", "Late" and "Recovery", for which a standardized customer handling process is defined each.

At each balance sheet date it is assessed whether there is any objective evidence that a financial asset or group of financial assets is impaired. A financial asset or a group of financial assets is impaired and impairment losses are incurred, when:

- there is objective evidence of impairment as a result of a loss event that occurred after the initial recognition of the asset until the balance sheet date (a 'loss event'),
- that loss event (or events) has an impact on the estimated future cash flows of the financial asset or group of financial assets and
- the amount can be reliably estimated.

Credit risk is accounted for by making individual impairment provisions and portfolio-based impairment provisions. The latter comprise impairment provisions for portfolios of loans with identical risk profiles that may be compiled under certain conditions. In the retail segment, provisions are built according to product portfolio and past due days. Individual and portfolio-based impairment provisions are not netted against corresponding receivables but are stated separately in the statement of financial position.

For credit risks related to loans and advances to customers and banks, provisions are made in the amount of expected loss according to homogeneous Group-wide standards. Risk of loss is deemed to exist if the discounted projected repayment amounts and interest payments are below the carrying value of the loans, taking collateral into account. Portfolio-based impairments are calculated according to valuation models that estimate expected future cash flows for the loans in the respective loan portfolio based on loss experience history. This is carried out regularly by considering economic conditions. For retail portfolios without a documented loss history of their own, peer group benchmark figures serve as a comparative base.

The entirety of the provision for impairment losses arising from loans reported in the statement of financial position (individual loan loss provisions and portfolio-based provisions) is shown as a separate item on the assets side, below loans and advances to banks and customers. The provision for impairment losses arising from transactions outside the statement of financial position is recorded under provisions for liabilities and charges.

Quantitative Disclosure according to accounting regulation

The total amount of exposures before deduction of the value adjustments and provisions and without taking into account the effect of credit risk mitigation, break down by exposure classes as follows:

Article 7 (1) Z 3 OffV Exposure classes	Exposure	Exposure
€000	31/12/2011	31/12/2010
Sovereigns	28,597,387	27,879,552
Financial institutions	34,862,621	29,689,044
Corporate customers	100,348,332	90,378,973
Retail customers	23,346,079	22,988,650
Total	187,154,418	170,936,219

The regional breakdown of credit exposure reflects RZB's broad diversification in European markets. The on- and off balance exposures are distributed regionally by domicile of the borrower:

Article 7 (1) Z 4 OffV € 000	Sovereigns	Financial institutions	Corporate customers	Retail customers	Total
Austria	10,948,762	22,701,648	46,051,861	11,681	79,713,952
Central Europe	7,678,024	719,243	22,421,194	11,186,960	42,005,421
Southeastern Europe	6,514,280	993,708	11,482,718	7,460,683	26,451,390

Direct write-downs and recoveries recorded directly in the income statement are disclosed as follows:

§7 (3) OffV €000	2011
Direct write-downs	133,188
Income received on written-down claims	75,986

Article 13 OffV Equity exposures not held in the trading book

Differentiation between exposures based on their purpose

Raiffeisen Zentralbank as universal bank holds equity investments in credit or financial institutions as well as in companies whose activities constitute a direct extension of banking activities or a related ancillary activity. Participations of the parent company are managed by the Participations Management & Controlling division. This division is responsible for controlling risks arising from long-term equity investments of the parent company (and for returns generated by these investments as well). Investments in RZB's equity investments are made by the Managing Board of Raiffeisen Zentralbank on the basis of individual due diligence only. Indirect participations held by different members of RZB Group are often managed by local units in coordination with the parent company whereby Raiffeisen Bank International AG plays a major role for activities in Central and Eastern European countries.

Overview of accounting and valuation methods

The consolidated financial statements of Raiffeisen Zentralbank were prepared in accordance with the *International Financial Reporting Standards (IFRS)* published by the International Accounting Standards Board (IASB).

Shareholdings in subsidiaries not included in the consolidated financial statements because of their minor significance and shareholdings in companies that are not valued at equity are shown under financial investments and are measured at amortized cost if no share prices are available. Other shareholdings are recognized in the category financial assets available-for-sale. Changes in value are directly recognized in equity without effecting income statement. Impairments are shown in the income statement.

Article 11 OffV Internal models for limiting market risks

RZB defines market risk as potential adverse market conditions that cause losses in trading and investment books. Changes of foreign exchange rates, interest rates, credit spreads, prices of shares and commodities as well as relevant market parameters, e.g. implied volatilities, create market risk. Market risk of customer business is transferred to Group Treasury department via transfer pricing. Group Treasury manages structural risks and is responsible for adherence to limits on group level. Business department Capital Markets is responsible for proprietary trading, market making and customer business in money market products as well as capital market operations (Sales).

RZB measures, monitors and manages all market risks on group level. It uses an internal model for calculating own funds requirements for the trading book according to SolvReg for risk categories "General position risk associated with interest rate instruments" and "Foreign-exchange risk (including the risk arising from gold positions)" for Raiffeisen Bank International AG. For other portfolios and risk types the standardized approach is used. More details on the own funds requirement are shown on page 13.

Organization of Market Risk Management

Market Risk Committee

Market Risk Committee (MACO) is responsible for the strategic market risk management of all market risks within the group. The limit on group level is set by the Management Board in due consideration of the risk bearing ability of the group as well as of the budget. Breaking down the total limit on sub-limits for business departments is done in accordance with strategies, business models and risk appetites of the individual departments.

Operational market risk management

Market Risk Management (department MRM) ensures the adherence of business volumes and product variety to approved strategies and risk appetite of the group. MRM is responsible for designing and refining risk management processes, adequate infrastructure and risk management systems. Furthermore the department develops risk rule books and methods of assessing and quantifying market risks. MRM is also responsible for the independent daily measurement and reporting of all market risks as well as of market risk induced credit risks of derivative trading.

Products approval process

All products that are allowed for taking open positions are defined in the product catalogue. New products are only added to this list when they have passed the product approval process (PEP). Validating product applications is done thoroughly including a comprehensive risk analysis of the new product. New products can only be introduced if they are evaluated and presented correctly in the Front-Office and risk management systems of RZB.

RZB uses a comprehensive risk management approach that includes trading and investment books (total return approach). Management of market risks is done consistently for trading and investment books. The following risk parameters are measured on a daily basis and are limited:

- Value-at-Risk (VaR), confidence level 99%, holding period 1 day
Value-at-Risk (VaR) is central to the design of the risk management instruments used in RZB. VaR is the main control mechanism for liquid markets under normal market conditions. The used methodology of estimating VaR is a hybrid simulation approach. 5000 scenarios are generated and used for full revaluation of the portfolio. The hybrid approach allows the combination of the advantages of historic and Monte Carlo simulations. Scenario generation is based on the given histories of market parameters (time length 500 business days). Modern features like volatility declustering, random time changes, an extreme event container are incorporated in the assumptions of the distribution and enable appropriate modelling of fat tails and asymmetric distributions. All sub-portfolios are treated in the same way. The result of one portfolio is the statistical parameter of the aggregated profit & loss vector which again aggregates single deal profit and losses for each scenario. The model has received regulatory approval for being used in order to report capital requirements.

- Sensitivities (Foreign exchange, BPV, Gamma, Vega, Equity, Commodity)
Limits on sensitivities help avoiding risk concentrations under normal market conditions. They are installed as the most important control mechanism in stressed or illiquid markets.
- Stop Loss Limits
This limits supports the position management process of traders by preventing them from keeping positions open in adverse markets. Losses thus cannot be accrued unlimitedly.

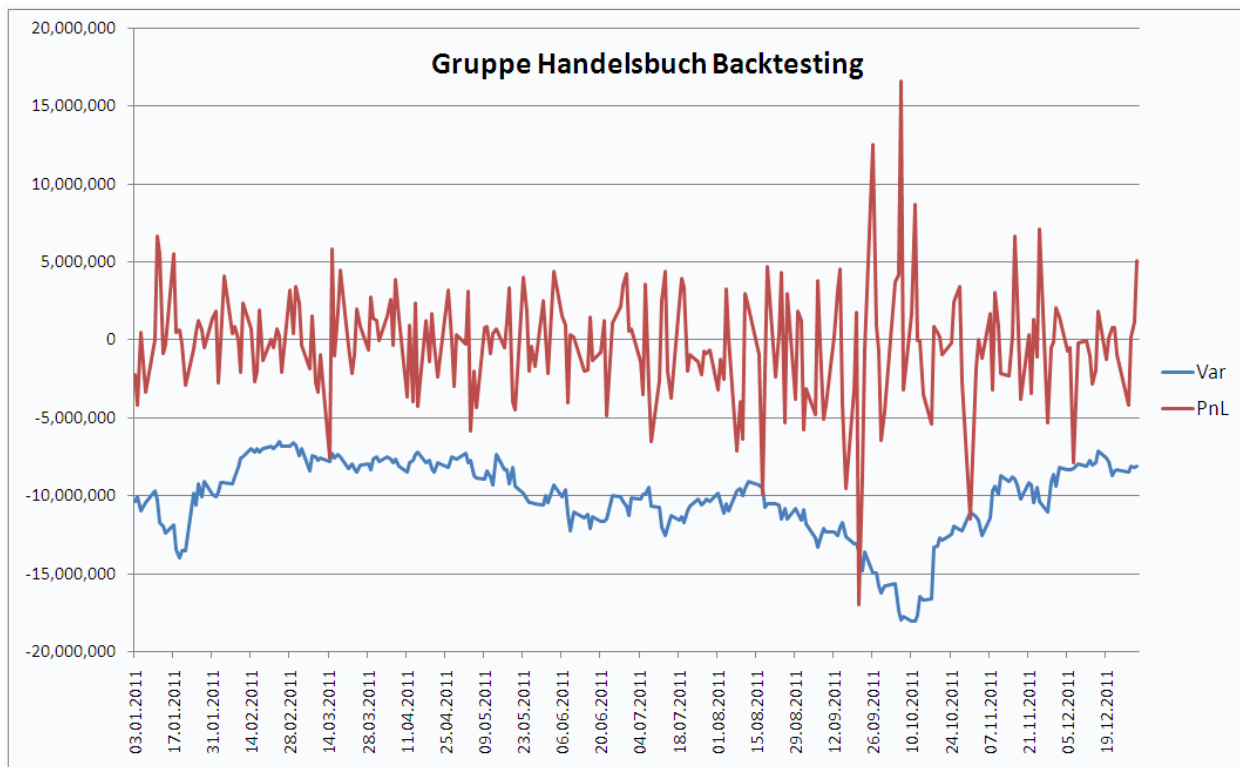

Besides these limits comprehensive stress testing is done on a daily basis. The portfolio of RZB group and all its sub-portfolios are calculated in a big variety of single and combined stress scenarios. Potential risks that are disclosed by stress testing are reported to the Market Risk Committee and are also taken into consideration in the limit allocation process. Both, VaR and stress results are also observed in the allocation process of economic capital. Reports for stress results are an integral part of the daily market risk reporting. These stress reports contain the worst case scenario results (highest potential losses) as well as the results of selected scenarios that are of interest for the specific portfolio.

The applied stress scenarios contain changes of single risk factors as well as simultaneous changes of groups of risk factors. The exact scenario specifications were developed together with Research respectively retrieved from analysis of market data time series (historically observed 10-day changes, correlations of risk factors given in stressed periods). Research is also consulted on identifying contagion effects between markets in order to define groups of markets that are stressed simultaneously. Scenario examples are Liquidity Crisis in "Dollar Influenced Currencies" or "Russian Politic Sensitive States". Furthermore effects on portfolio values stemming from steepening, flattening or turns of interest rate curves and extreme money market increases are calculated. Hypothetical worst case events (like significantly decreasing interest rates in times of falling equity markets applied on CPPI and OBPI products) are reported daily.

The used risk assessment and measurement methods are continuously backtested and statistically validated. Qualitative analysis of profitability is also performed regularly. Detected shortcomings are corrected.

Backtesting in the trading book

The chart below shows VaR results vs. hypothetical profit and losses. The blue line is the predicted maximum loss (with a confidence level of 99%) for the following business day. The red line is the hypothetic profit/loss. It is calculated on the following day reflecting the actual change of portfolio value (i.e. based on the actually occurred market movements). As can be seen, the model is reflecting volatility regimes of the market very accurately and reacts immediately to changed conditions. The group portfolio is well diversified and no backtesting violation was seen in 2011.

Valuation rules according to Articles 198 to 202 Solvency Regulation

Valuation at market prices

The valuation of Raiffeisen Bank International's positions (for Vienna, excl. Branches) is done independently from trading departments on a daily basis. Price sources used are predefined data provided by external market contributors (e.g. Reuters, Bloomberg, MarkIT). The valuation is done in the respective front office system. The exact process is different for different systems, but always based on the following principle: At the end of the business day the prices are retrieved from the different contributors. Control mechanisms contain e.g. several reports that allow checking update date/time respectively lack of liquidity of price source, detecting unusual jumps and missing data, etc. If data is incorrect already predefined alternative price sources will be used to double check. Manual corrections are subject to four-eye-principle. Checked data is uploaded to the front office systems respectively authorized in the front office system and subsequently used for valuation of the positions in the system.

Independent valuation

The daily valuation is not done by the trading departments, but by an independent department in the Risk Controlling division. In the course of the daily price verifications, adequacy of prices used is checked. If independent price sources are unavailable model prices will be used. Market Risk Management is defining the standards for model prices.

Valuation adjustments / reserves

In case model prices are used, RZB experts have to check whether valuation adjustments are necessary. The positions, for which valuation adjustments have to be made, are presented on a monthly basis to the Market Risk Committee.

Valuation at model prices

The valuation of illiquid bonds is done by means of proxy credit spreads. Criteria for the selection of proxies are country, industry, rating and maturity. Price sources used for proxies are market data contributors like MarkIT, Bloomberg etc. The valuation of the bonds itself is done by means of the internal model pricing functions. Depending on the adequacy of the proxy, the spread retrieved from these systems will be either used directly as input parameter or as minimum value to price the bond with. For each bond the average price is then calculated.

Systems and control mechanism

The valuation process is done in the front office systems. For each front office system a written documentation of the daily pricing routine exists and comprises

- Positions (Portfolios; deal books)
- Products
- Prices to be checked
- Price sources (used and alternatives; with ranking of usage)
- Description of checks to be performed
- Actions to be taken in case of incorrect/outdated data
- Workflow of end-of-day processes

The department responsible for the valuation is part of Risk Controlling, a division reporting to the CRO. Valuation results are reported weekly to the Management Board as part of the profit and loss overview from the Market Risk Committee.

Article 14 OffV Interest rate risk in the banking book

Interest rate risk in the banking book arises from different maturities and repricing schedules of RZB's assets and the corresponding liabilities (i.e. deposits and refinancing on debt and capital markets). This risk in particular is due to different interest rate sensitivities, rate adjustments, and other optionality of expected cash flows. Interest rate risk in the banking book is material for euro and US-dollar as major currencies as well as for local currencies of network banks located in Central and Eastern Europe.

This risk is mainly hedged by a combination of on- and off-balance sheet transactions where the Group uses in particular interest rate swaps and – to a smaller extent – also interest rate forwards and interest rate options. Balance sheet management is a core task of the central Global Treasury department and of individual network banks, which receive assistance from asset liability management committees. They base their decisions on various interest income analyses and simulations that ensure proper interest rate sensitivity in line with expected changes in market rates and the overall risk appetite.

Interest rate risk in the banking book is not only measured in a value-at-risk framework but also managed by traditional tools for nominal and interest rate gap analyses. Since 2002, interest-rate risk has been the subject of quarterly reporting within the scope of the interest-rate risk statistics submitted to the supervisory authorities. These reports also show the change in the present value of the banking book as a percentage of own funds in line with the requirements of Basel II. Maturity assumptions needed in this analysis are defined as specified by regulatory authorities or based on internal statistics and empirical values. In 2011, the changes in present value of banking book positions after an interest rate shock of two hundred basis points were always lower than the regulatory reporting threshold of 20 per cent of eligible own funds in RZB.

The following table shows the change in the present value of RZB's banking book given a one-basis-point interest rate increase for the whole yield curve in thousands of euros. Interest rate risk in the banking book increased due to investments into securities issued by first class issuers which are also held to improve the liquidity position.

Article 12 OffV Operational risk

RZB currently calculates regulatory capital requirements for operational risks according to Basel II using the standardized approach. After several years of implementation the Ukrainian network bank, Raiffeisen Bank Aval, applies this calculation methodology starting as of 1 January 2010 as well. As a consequence the standardized approach now is used in all major Group members.

Article 15a OffV Remuneration

RBI was kept busy in 2011 with the forthcoming regulatory developments. A major part of the anticipated change comes from the EU CRD III capital requirement guideline and the more far-reaching CRD IV/CRR directive. The potential influence of the new and modified statutory regulations on RBI was analyzed in detail. Corresponding internal guidelines were issued where necessary, regarding remuneration policy and the appropriateness of remuneration.

Significant changes in the area of compensation

Changes in the Austrian Banking Act (§39 b BWG), which were based on an EC Directive (Capital Requirements Directive III, CRD III), have demanded mandatory requirements for variable compensation systems of banks since 2011. The objective is to motivate employees to act in a manner that is more strongly focused on sustainability and long-term outlook. Against this backdrop, RZB has adjusted its compensation schemes accordingly in 2011 and developed special regulations for members of management, risk buyers, employees with control functions, and employees who belong to the same compensation group as management and risk buyers and whose work has a significant impact on the risk profile (so-called risk personnel).

The effect of specific criteria – e.g. business model, assets, economic capital, etc. – was evaluated for all companies belonging to RZB, and the application of the newly developed compensation guidelines were determined and so-called risk personnel defined. Based on these factors, very detailed general compensation principles were defined as a basis for the compensation policy and practice. In addition, special principles such as deferring parts of the variable compensation over a defined period of time were implemented for the risk personnel.

The harmonization and restructuring of the compensation structures, which commenced in 2010 as part of the merger between the business divisions of RZB and Raiffeisen International, was continued and concluded in 2011.

One of the tasks in 2011 was the development of a new, unified compensation system (including a new bonus system) for the company, which complies with the new regulatory conditions. In addition, the base pay structures were subject to comparison with the market, and salary ranges for various function groups were developed.

Variable Remuneration - special remuneration policies

In RZB variable compensation is based on bonus pools on the bank or profit center level. Every variable pay system has fixed minimum and maximum levels and thus defines maximum payout values.

For the fiscal year 2011, the bonus pools were based on the ratios net profit after tax, the cost/income ratio and return on risk adjusted capital (RORAC) where a comparison of the budget with the year-end figures was made. The bonus of all board members of affiliated banks in Central and Eastern Europe was already in 2011 treated as a deferred payment where 30 percent of the annual bonus will be deferred over 3 years. The payout at the beginning of 2014 is dependent on the average annual target achievement (comparison of the budget with the year-end figures) of the ratio's net profit after tax and RORAC of the respective Group's unit.

As of the fiscal year 2011 the following general and specific principles for the allocation, for the claim and for the payment of variable remuneration (including the payment of the deferred portion of the bonus) for board members of RBI AG and certain Group units and identified staff ("personnel with an impact on the risk profile") are applied, as represented in the chapter general HR part:

- 60 per cent of the annual bonus will be paid out on a proportional basis with 50 per cent cash immediately (up-front), and 50 per cent through a phantom share plan, which will pay out after a holding period (retention period) of one year. An exception to this are the banks in Bulgaria, with a 40 percent up-front portion and a retention period of two years, and the Czech Republic with a holding period of 1.5 years.
- 40 per cent of the annual bonus will be deferred over a period of three (in Austria: five) years. Payment will be made on a proportional basis, 50 per cent cash and 50 per cent based on the phantom share plan.

The allocation, the claim and the payment of the variable remuneration (including the payment of a portion of the deferred bonus) depend on the following criteria:

- earning a net profit,
- the achievement of the legally required hard core capital ratio of the RBI Group,
- additionally, in Group units on the local level, the achievement of the legally required local minimum "core tier 1 ratio excluding buffers", and
- the performance of the business areas and the affected person.

The obligation from number 11 of the annex to Section 39b of the Austrian Banking Act, under which a proportion of at least 50 per cent of variable compensation for risk personnel should take the form of shares or equivalent non-cash payment instruments, is covered in the RBI Group by a stock phantom plan. Proportionally 50 per cent of the "up-front" and "deferred" bonus section will be divided by the average closing price of RBI's shares on the Vienna Stock Exchange for that year serving as the basis for calculating the bonus. Thereby, a certain amount of phantom shares will be determined. This amount will be fixed for the entire duration of the deferral period. After the expiration of the respective retention period the amount of specified phantom shares will be multiplied by RBI's share price for the previous fiscal year. The resulting cash will be paid when the next available monthly salary is paid.

These rules are valid unless any applicable local laws prescribe a different procedure.

Further details of the employee compensation plans are described in the management report.

Share based compensation

The Management Board with approval by the Supervisory Board of RBI AG has approved the existence of a share incentive program (SIP) which offers performance based allotments of shares to eligible employees at home and abroad for a given period. Eligible employees are current board members and selected executives of RBI AG, as well as executives of its affiliated bank subsidiaries and other affiliated companies.

The number of ordinary shares of RBI AG which will ultimately be transferred depends on the achievement of two performance criteria: the targeted return on equity (ROE) and the performance of the share of the RBI AG compared to the total shareholder return of the shares of companies in DJ EURO STOXX Banks index after a three-year holding period. Furthermore, an employment contract must exist with RBI. Participation in the SIP is voluntary.

Expenses related to the share incentive program in accordance with IFRS 2 (share-based payment) are charged to equity.

The Human Resource Department was supported by Tower-Watson, an external consultant, for marketresearch and marketanalyses.

The table below shows the payments, splitted into employees and management:

€000	Investment Banking	Retail Banking	All other	Total
All Staff				
Number of identified staff	2,853	18,778	38,205	59,836
Total remuneration	178,059	289,858	574,685	1,042,602
